## Other Information

### AVAILABILITY

eLine is not available everywhere. Availability depends on a number of factors including whether the necessary equipment is available at the relevant exchange, the length of the cable to the nearest exchange and the quality of the existing copper pairs that the service runs over.

You need available copper lines in order to get eLine, but the line must not be active and in use as a PSTN telephone service. In some cases you may not have enough copper lines at your location for the service to work.

### ETHERNET SPEEDS

- Actual speeds you will receive will vary due to a number of factors such as your distance from an exchange, the network connecting the exchange, your equipment and software and internet traffic.
- Download speeds on devices connected via a Wi-Fi modem or network extender may be slower than on devices connected by Ethernet cable.

### EQUIPMENT

You may use your own router provided it is compatible with our service, however this means that you will be responsible for the configuration and management of the router. Ask us for information on approved routers. Alternatively you may purchase your router from us. If you do purchase a router from us we will support, monitor and manage the router on your behalf.

### BILLING

We will bill you in advance for the minimum monthly charge and features and in arrears for calls. Your first bill will include charges for part of the month from when you took up your plan until the end of that billing cycle, as well as the minimum monthly charge in advance for the next billing cycle.
