Nano, Mini, Standard, Super and Max plans have access to a maximum download limit of 100Mbps on 4G across 90% of the population. 4G devices will enjoy typical speeds of 2-50Mbps on the 4G network. Typical wireless packet data upload speeds on the 4G network are 1 to 10 Mbps. On 3G, typical download speeds are 1.1- 20Mbps across more than 85% of the population, 550kbps to 8Mbps across more than 95% of the population, and 550kbps to 3Mbps in remaining coverage areas reaching 98.5% of the population. Typical wireless packet data upload speeds on the 3G network are 300kbps to 3Mbps across more than 93% of the population and in remaining coverage areas 300kbps to 1Mbps. End-user speeds will also vary due to factors such as device capabilities, location, distance from the base station, local terrain, user numbers, hardware and software configuration, download source/upload destination and network management measures.
